RELEASE DATE: May 28, 2015

U.S. EPA awards \$500,000 brownfields grant to Clark County, Nevada, for the Maryland Parkway High Capacity Transit Corridor

SAN FRANCISCO – The U.S. Environmental Protection Agency announced today that Clark County, Nev., in collaboration with the City of Las Vegas and the Regional Transportation Commission, will receive \$500,000 in federal grant funds to support the revitalization and redevelopment of the Maryland Parkway High Capacity Transit Corridor. Clark County is among 147 communities nationwide receiving funding to assess and clean up historically contaminated properties, also known as brownfields, for reuse and development.

“EPA is committed to helping communities strengthen their local economy and neighborhoods by cleaning up abandoned industrial and commercial properties – places where environmental cleanups and new jobs are needed most,” said Jared Blumenfeld, EPA’s Regional Administrator for the Pacific Southwest. “Clark County and their coalition partners will use these funds to improve the Maryland Parkway High Capacity Corridor in the heart of Las Vegas’ urban core.”

The brownfields grant will advance the region’s goals for Transit Oriented Development, economic development, and quality of life. These goals were identified through the new Southern Nevada Strong regional plan, funded by a \$3.5 million HUD grant. Clark County and the RTC will conduct assessments to catalyze high-density, transit-oriented development of a key transportation corridor between the University of Nevada in Las Vegas and the McCarran International Airport. As the region’s first multi-modal corridor, over the next 20 years, the development will generate much needed jobs and will spur

additional development and investments in the area.

In addition to providing brownfields funds, EPA is collaborating with the Regional Transportation Commission, Clark County, local partners, and the U.S. Department of Transportation through EPA's *Making a Visible Difference in Communities* effort – to help the Las Vegas area implement transit oriented development projects. EPA has made *Making a Visible Difference in Communities* a cross-agency priority, which focuses work in communities where EPA can best leverage agency resources and other federal investments.

Since the inception of EPA's brownfields program in 1995, cumulative program investments have leveraged more than \$22 billion from a variety of public and private sources for cleanup and redevelopment activities. This equates to an average of \$17.79 leveraged per EPA brownfield dollar expended. These investments have resulted in approximately 105,942 jobs nationwide. EPA's brownfields program empowers states, communities, and other stakeholders to work together to assess, safely clean up, and sustainably reuse brownfields sites.
